Consumer Confidence Report for 2013
May 22, 2014

The following is the annual report for all homeowners.

We are very pleased to present to you this Annual Quality Water Report. This report is designed to inform you about the quality of our water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water.

Our water source is from our well at 4092 East Harbor Road. Our well is 270 feet deep and has a water flow of 105 gallons per minute. The static water level is at 226.4 feet.

This report shows our water quality and what it means. Beverly Beach Improvement Club routinely monitors for contaminants in our drinking water according to Federal and State Law's. This table shows the results of our monitoring for the period of January 1 to December 31 2013.

These are some terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions;

- 1, Parts per million (PPM)
- 2, Parts per billion (PPB)
- 3, Treatment Technique (TT)
- 4, Action Level (AL)
- 5, Maximum Contaminant Level (MCL)
- 6, Maximum Contaminant Level Goal (MCLG)
7. ND (Not Detected)

Test Results;

We tested every month in 2013 for Coli form and E-coli; all tests were Satisfactory for 12 months. .

We tested for the following water compliance: 8/15/13

A. Nitrate-N

Results: ND

MCL is 10.0 MG

These compounds come from erosion of natural deposits in the earth,

Page 2

Inorganic Compounds Report:

B. Asbestos 5/16/13

Results ND

C. Total Organic Carbon 12/5/13

Results 2.16 mg/L No MCL

D. Electrical Conductivity (For Sea water Intrusion) 12/5/13

Results 362 uS/cm MCL 700

E. Chloride (For Sea water Intrusion) 12/5/13

Results 14 mg/L MCL 250 mg/L

Volatile Organic Compounds Report:

56 Compounds Tested and all were ND

Chloromethane 1.2 PPB Safe

Total Trihalomethane **103.6** PPB MCL 80 PPB

Because the Trihalomethane MCL was exceeded, we were placed on Quarterly monitoring for THM and HAA5 Compounds.

Disinfection By-Products Compounds Report:

Total Trihalomethane 8/27/13

Results **106.3** MCL 80 PPB

HAA(5)

Results 39.4 PPB MCL 60 PPB (OK)

Disinfection By-Products Compounds Report:

Total Trihalomethane 12/23/13

Results 49.7 PPB MCL 80 PPB

HAA(5) 16.8 PPB MCL 60 PPB

(Improving, more testing in June 2014)

I am pleased to report that our drinking water is safe and meets federal and state requirements. We have learned through our monitoring and testing that some contaminants have been detected. The EPA and State Health Dept. have determined that our water is safe at these levels.

To ensure that tap water is safe to drink, the Environmental Protection Agency (EPA) and the Washington State Health Dept. prescribes regulations that limit the amount of certain contaminants in our water.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of Contaminants do not necessarily indicate that the water poses a health risk. More information about contaminants and potential effects can be obtained by calling the EPA Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from health care providers. EPA_CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from Safe Drinking Water Hotline 1-800-426-4791.

LEAD Contaminants in drinking water.

Elevated levels of lead can cause serious health problems, especially for

Pregnant women and young children. Lead in drinking water is primarily from material and components associated with service lines and home plumbing components. Beverly Beach Improvement Club is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for hours, you can minimize the potential from lead exposure by flushing your water tap, you may wish to have your water tested, Information on Lead in drinking water, testing

Methods and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>

As we go into the next few years there will be more Water testing and new rules from the Department of Health. We will keep everyone informed when the new rules become law.

In 2013, 3,360,000 gallons of water were pumped from the well. This is an average monthly usage of 280,000 gallons, and monthly usage of 9,032 gallons per day, and a daily average of 83.6 gallons per connection.

Nation wide the average is 300 gallons so we are below the National average.

The annual Water Use Efficiency Report to Washington State was sent in and we pumped 102,600 gallons less than in 2012.

Our Water Conservation Program is working and your Board members thank you. We will have our annual membership meeting on August 23 of this year at the Bayview Senior Center at 10:00 AM. Coffee & pastries at 9:30 AM if you wish to come early.

Thank You,

Joseph E. Waldrup
